

CASE STUDY

GOD'S HOUSE TOWER SOUTHAMPTON

UNDERFLOORHEATING
DESIGN | SUPPLY | INSTALLATION

PROJECT BACKGROUND

God's House Tower is a Grade I listed building and scheduled ancient monument in the heart of Southampton City Centre. Through a £1.3 Million scheme funded by the National Heritage Lottery fund, God's House Tower has been transformed into a cultural centre for exhibitions and arts activities.

As with any listed building, installation is a delicate process whilst protecting the medieval fabric of the building and areas of archaeological interest, which is why we specified MERCURY ARIAL, a bespoke clip-to-mesh system throughout.

Overall we love the fusion of the old fabric into the new contemporary areas and what will be an inviting venue for artists.
